

Q2: precision and movement after two measurements

Deterministic synthetic design | 336 worlds per strategy | 9 distinct public first-observation contexts

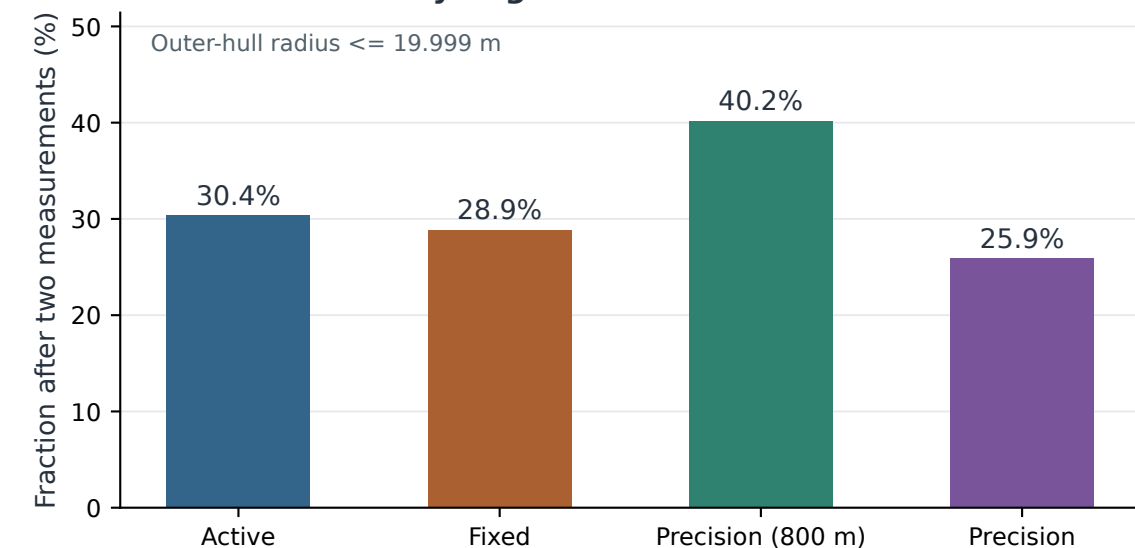

A Posterior outer-hull uncertainty

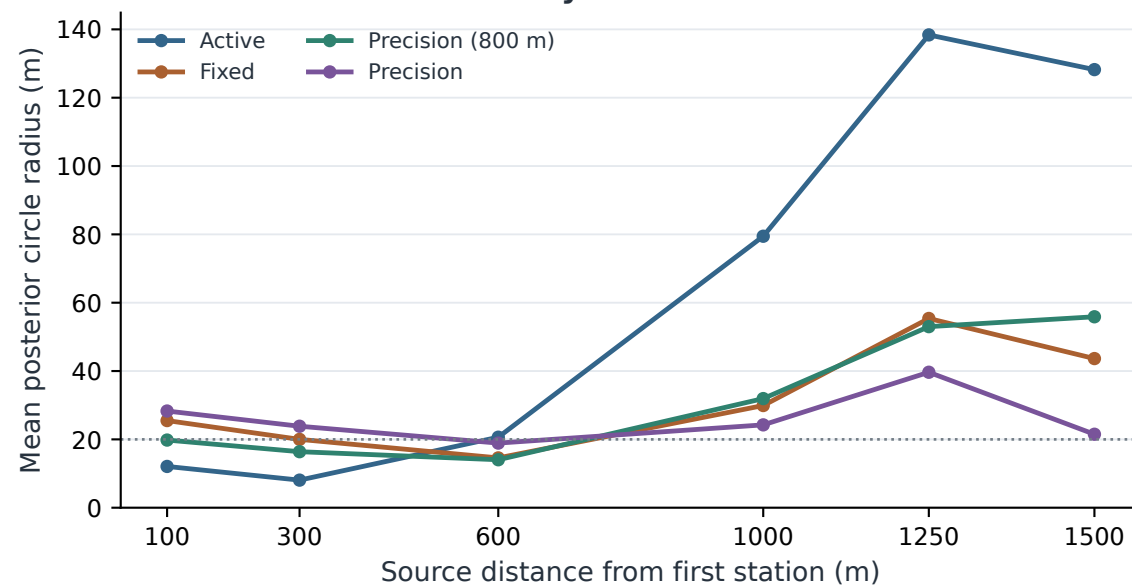

B Movement from the first to second station

C Already eligible for certified clearance

D Sensitivity to source distance

Sample maxima are not worst-case proofs. The design is not an estimated official source distribution.

Movement excludes sensing and clearance actions. Source: q2_precision_v2/synthetic_summary.json
